EDUCATION

University of Waterloo

Waterloo, ON

Bachelor of Computer Science – Cumulative GPA: 94%

April 2028

- **Coursework:** Data Structures and Data Management, Object-Oriented Software Development, Numerical Computation, Probability, Statistics, Logic and Computation, Intro to Optimization

WORK EXPERIENCE

Intact

Toronto, ON

AI Developer I

May 2026 – August 2026

- Developed and implemented backend enhancements in Python for an internal AI application, improving functionality, maintainability, and system performance.
- Assisted in the first production deployment of an internal AI application, collaborating with cross-functional teams to validate functionality, resolve deployment issues, and ensure a successful launch.

Geotab

Kitchener, ON

Software Developer Intern

September 2025 – December 2025

- Developed production React features and resolved customer-facing issues in a large-scale fleet management platform.
- Built and maintained backend services in C#/.NET with an emphasis on reliability, code quality, and maintainability.

Outlier

Remote - San Francisco, CA

AI Trainer

May 2024 – December 2024

- Trained various large language models to solve complex math problems by providing step-by-step analytical feedback, resulting in the advancement of GenAI's mathematical reasoning capabilities.
- Executed flawless 5-star tasks by meticulously crafting prompts to realign the model's mathematical process, resulting in a promotion to review tasks further down the project pipeline.

LEADERSHIP EXPERIENCE

Musical Director | *The Water Boys* – University of Waterloo

May 2026 – August 2026

- Arranged music and led weekly rehearsals for a 16-member a cappella ensemble, contributing to a performance that generated sales of over 200 concert tickets.
- Produced an Instagram video reaching over 200,000 views through creative direction and editing.

Team Leader | *WATonomous* – University of Waterloo

January 2025 – April 2025

- Led a team developing autonomous navigation software in C++ using ROS2, implementing perception and planning logic for a simulated rover.
- Built simulation infrastructure using Gazebo and Foxglove to validate autonomous navigation before deployment.

PROJECTS

Chess | C++

July 2025 – August 2025

- Led a group of three to develop an object-oriented chess program with custom piece graphic designs that supports human vs. human, human vs. computer, and computer vs. computer games, resulting in a perfect grade of 100%.
- Implemented a chess engine in C++ using minimax search, alpha-beta pruning, move ordering, and board evaluation.

GetAway Guru | Java, Swing

February 2023 – June 2023

- Developed a GUI travel recommendation program, implementing a database with 100+ destinations.
- Led a group of 5 through the software development life cycle, resulting in an A+ grade.
- Designed an algorithm to recommend destinations for users based on their previous logged trips using a HashMap.

TECHNICAL SKILLS

Languages: C++, Python (numpy, Pandas, Matplotlib, pytest), Java, JavaScript, HTML, CSS, C#

Tools and Frameworks: React.js, Node.js, .NET, Docker, Git, ROS2, Gazebo, Foxglove
